### **And More Pain Presentations!**

“Orofacial pain is caused by diseases or disorders of regional structures, by dysfunction of the nervous system, or through referral from distant sources. Treatment of orofacial pain is a specialty in dentistry in many parts of the world and an emerging area of specialization in others. One organized diagnostic approach categorizes orofacial pain into four groups based on the underlying pain mechanisms-namely, musculoskeletal, neuropathic, neurovascular, and psychogenic pain”.

**Fernando Cervero, MD, PhD, DSc  
IASP President**
